INTERSHIP

Full Stack Developer (Internship)

ReadyTeacher, Melbourne | August 2019 — September 2019

ReadyTeacher is Australia's first staffing platform for English Language and Vocational Teachers. Its platform is built on MERN stack with AWS S3, CSS, MySQL, Wit.ai, Sendgrid, Stripe Payment and Google Calendar API integration.

- Working in teams to build amazing products
- Learning new frameworks & technologies
- Reducing ReadyTeacher manual workload by integrating and maintaining APIs into App
- Created "How To" guides for future and current team members to follow

SOFTWARE PROJECTS

MI Academy Learning Management System (LMS) App

June 2019 - July 2019

Building a real-world learning portal App for our client MI Academy with two other Coder Academy Students. The MI Academy App allows MI Academy clients to be able to access online training on marketing, CX, UX and innovation.

- Learned frontend development and backend technologies including React, Express.js, Node.js and MongoDB.
- Learning about Agile methodologies & how to apply them.
- Challenges included front end user authentication, implementing notification features and creating a good UX experience.
- <https://mi-academy.netlify.com>

Oz Gamers Two-Sided Market App

April 2019 - May 2019

A group-based project consisting of two developers, aiming to create a gaming store CRUD App built on Ruby on Rails. This gaming store will allow a gamer to be able to sell or buy games online.

- Technologies used - HTML, CSS, Bootstrap, Javascript, Amazon S3, Stripe, Mailgun, Devise, CanCan, Heroku and PostgreSQL. Implementing User Authorization System using CanCan, improving UI experience with Bootstrap and also designed three tables in PostgreSQL.
- Implementing User Authorization System using CanCan, improving UI experience with Bootstrap and also designed three tables in PostgreSQL.

Mood.IO Ruby Terminal App

February 2019 - March 2019

Mood.IO allows the user to be able to create their journal entries that are stored to their own individual account and also are prompted to enter what mood they are in at their completion of their entry.

- Implemented a user menu system that allows the user to be able to create, delete and view their journal entries.
- Improved UI experience by adding ASCII Art.
